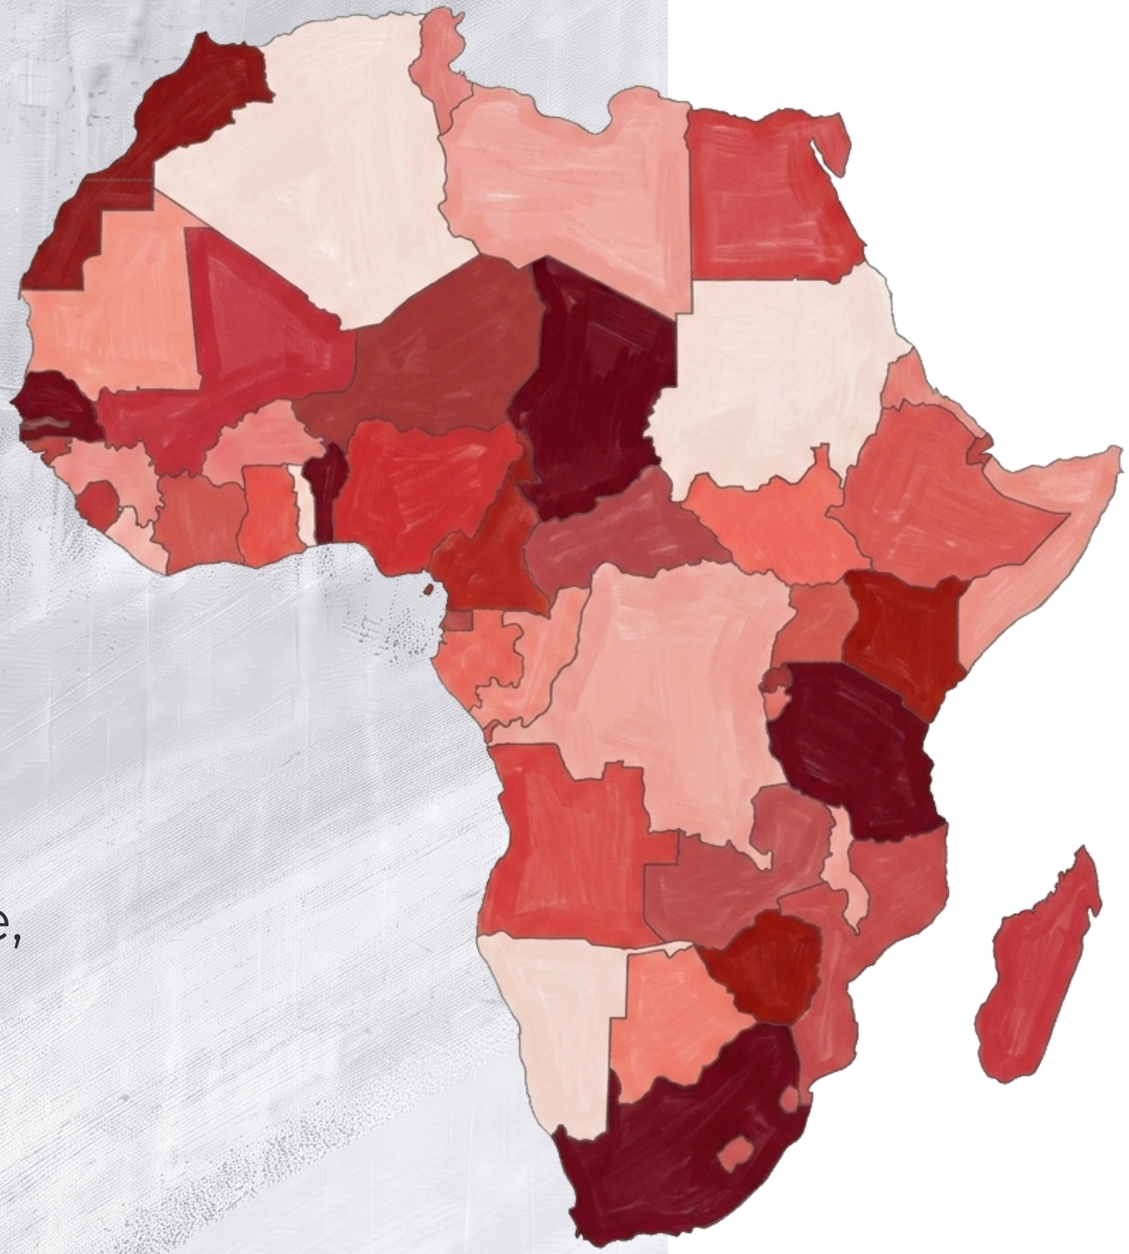
Red Apple

Reproductive & preventive healthcare,
built for African women

Pre-seed pitch



The Problem

Women across Africa face a significant reproductive and women's health crisis, driven not only by disease but by limited access to timely, affordable and reliable care.

MATERNAL DEATHS IN 2023

182,000

In 2023, Africa accounted for approximately 182,000 maternal deaths, i.e., 70% of all maternal deaths globally, many resulting from preventable pregnancy and childbirth complications.

BREAST CANCER DEATHS IN 2022

71,662

Beyond maternal mortality, women face conditions including PCOS, endometriosis, infertility, menstrual disorders, cervical cancer, breast cancer, and menopause-related issues, often with delayed diagnosis and inadequate support. In 2022 alone, breast cancer caused an estimated 71,662 deaths in Africa, with late diagnosis contributing significantly to poor outcomes.

The challenge is compounded by health misinformation, which can lead to poor health decisions. Additionally, social stigma discourages women from seeking care for sensitive conditions, and high healthcare costs create barriers to consultations, diagnostics, treatment, and preventive services.

RedApple focuses on preventive medicine, addressing the reproductive health challenges that many women across Africa face. Our goal is to promote early awareness, prevention, and timely intervention, helping women identify potential health risks before they escalate into severe conditions.

Our Solution

RedApple is an AI native reproductive wellness platform built specifically for African women, combining:

- Period tracking
- Pregnancy monitoring & Support
- Fertility Planning
- Educational Content
- Telemedicine with licensed clinicians
- AI-assisted symptom analysis, flags potential concerns early and routes them to a clinician for review.
- Digital health record

Pre-Launch Traction

01 CORE PRODUCT BUILT

Period tracking, telemedicine, and digital health records are functionally complete.

Now in UI polish and bug-fixing ahead of launch.

02 ORGANIC EARLY DEMAND

327 **WAITLIST SIGNUPS IN 4 DAYS**

Zero paid marketing, organic-only outreach

03 MARKET SURVEY VALIDATES DEMAND

RedApple market survey

82.9% rated a RedApple-style app “very” or “extremely” useful

87.5% want to be notified at launch

73.9% are willing to pay something monthly for premium features

Market Size

01 / TOTAL ADDRESSABLE MARKET

TAM: $2.44B

325M internet-connected women aged 15–49 across Africa, calculated using an average expected spend of $7.5/year (based on our own user survey of Nigerian women).

02 / SERVICEABLE ADDRESSABLE MARKET

SAM: $411.75M

54.M internet connected women aged 15 to 49 across our near term markets, Nigeria, Ghana, and Kenya, at the same survey derived category ARPU.

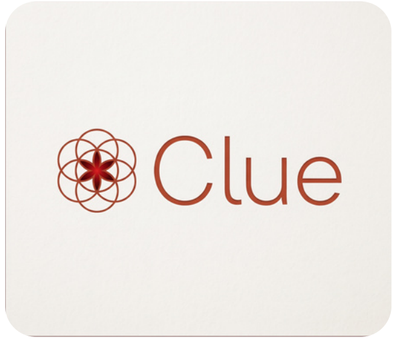
03 / SERVICEABLE OBTAINABLE MARKET

SOM: $20.59M

Methodology: Population figures from UN/Worldometer and DataReportal (2025–2026). ARPU from RedApple's own user survey.

Competitors

Existing women’s health platforms and services



Market Opportunity

Mobile-first Africa

With Nigeria reaching 109M internet users by late 2025 (45.5% penetration), digital healthcare can now meet women directly on their smartphones.

Expanding Care Needs

The women's health market is evolving beyond fertility and pregnancy to include preventive care, long-term condition management, hormonal health, and healthy aging

The Localization Gap

While global apps like Flo (73M MAU in Jan 2025) prove massive category demand, they lack the optimization required for African health systems, pricing models, and cultural contexts.

Business Model

Freemium

core tracking and education free; premium tier at ₦1,999/month unlocks advanced insights and telemedicine priority booking

Healthcare aggregator

telemedicine consultations priced at ₦20,000–₦30,000 by the clinician; RedApple takes a ₦1,000 platform fee per booking, with the remainder going to the provider

B2B

licensing to employers, insurers, and universities for employee and student wellness programs

Transactional (future)

commission on diagnostics and other provider referrals routed through the platform

Community → Partnerships → Retain → Expand

Phase 1 — Build the Community

Target: young African women aged 18–40. Channels: TikTok, Instagram, X, YouTube, women's-health creators, campus ambassadors, healthcare professionals, women's communities.

Phase 2 — Partner

Hospitals, clinics, universities, employers, insurers, healthcare providers, women's organizations, consumer brands.

Phase 3 — Retain

Turn RedApple from a period-tracking app into a year-round health companion. Loop: Track → Learn → Receive insight → Take action → Improve health → Return.

Phase 4 — Expand

Nigeria first, then high-potential African markets, reusing the same infrastructure with localized providers, content, payment systems, insurance, and clinical pathways.

Team

MR. MOLIB OKUBOR
FOUNDER & CEO

- Final-year medical student at Delta State University (Nigeria) with a demonstrated commitment to advancing women's and children's healthcare through charitable initiatives.
- Six years of sales, business development, and community management experience, featuring a proven track record of driving user growth and engagement in the blockchain sector.
- Directs company vision, strategy, and fundraising, leveraging his clinical background to ensure medical accuracy across all RedApple services.

DR. CHISOMEBI ANGELICA AZUBUIKE
CMO & CO-Founder

- Medical doctor trained at the University of Nigeria and certified digital marketer with credentials from HubSpot and Coursera.
- Public health advocate dedicated to educating women on reproductive wellness, debunking medical myths, and promoting evidence-based preventive care.
- Leads brand identity, comprehensive marketing strategy, customer acquisition, and overall market positioning.

MESAL
CTO & CO-FOUNDER

- Software engineer with four years of full-stack experience spanning freelance development and an enterprise pipeline operations internship at HEOSL.
- Leads RedApple’s technology and product development, translating the company vision into reliable, scalable digital solutions.
- Specializes in building robust web and mobile applications, API architectures, and AI-powered systems, designing the core infrastructure that enables RedApple to scale.

Investment Ask

$500K

Raising $500,000 in pre-seed funding

Runway & Milestones:

Provides 18 months of runway to execute our launch strategy, hit our Year-3 user and revenue targets, and lay the groundwork for a Seed round.

Use of funds:

Team & hiring: engineering, clinical, and growth hires to take the product from built to scaled

User Acquisition: Launching performance campaigns, creator partnerships, and campus ambassador programs to convert waitlist demand into paying users across Nigeria.

Regulatory & Compliance: Ensuring strict data protection via NDPC registration and securing MDCN verification for all medical practitioners.

Clinical & provider partnerships: onboarding hospitals, clinics, and licensed telemedicine providers to the platform

Operating runway & contingency

Why RedApple

LOCAL AFFORDABILITY

Priced and packaged for the African market from day one.

Localized Clinical Pathways

Built around licensed African clinicians and realistic in-market referral networks, bypassing generic global directories.

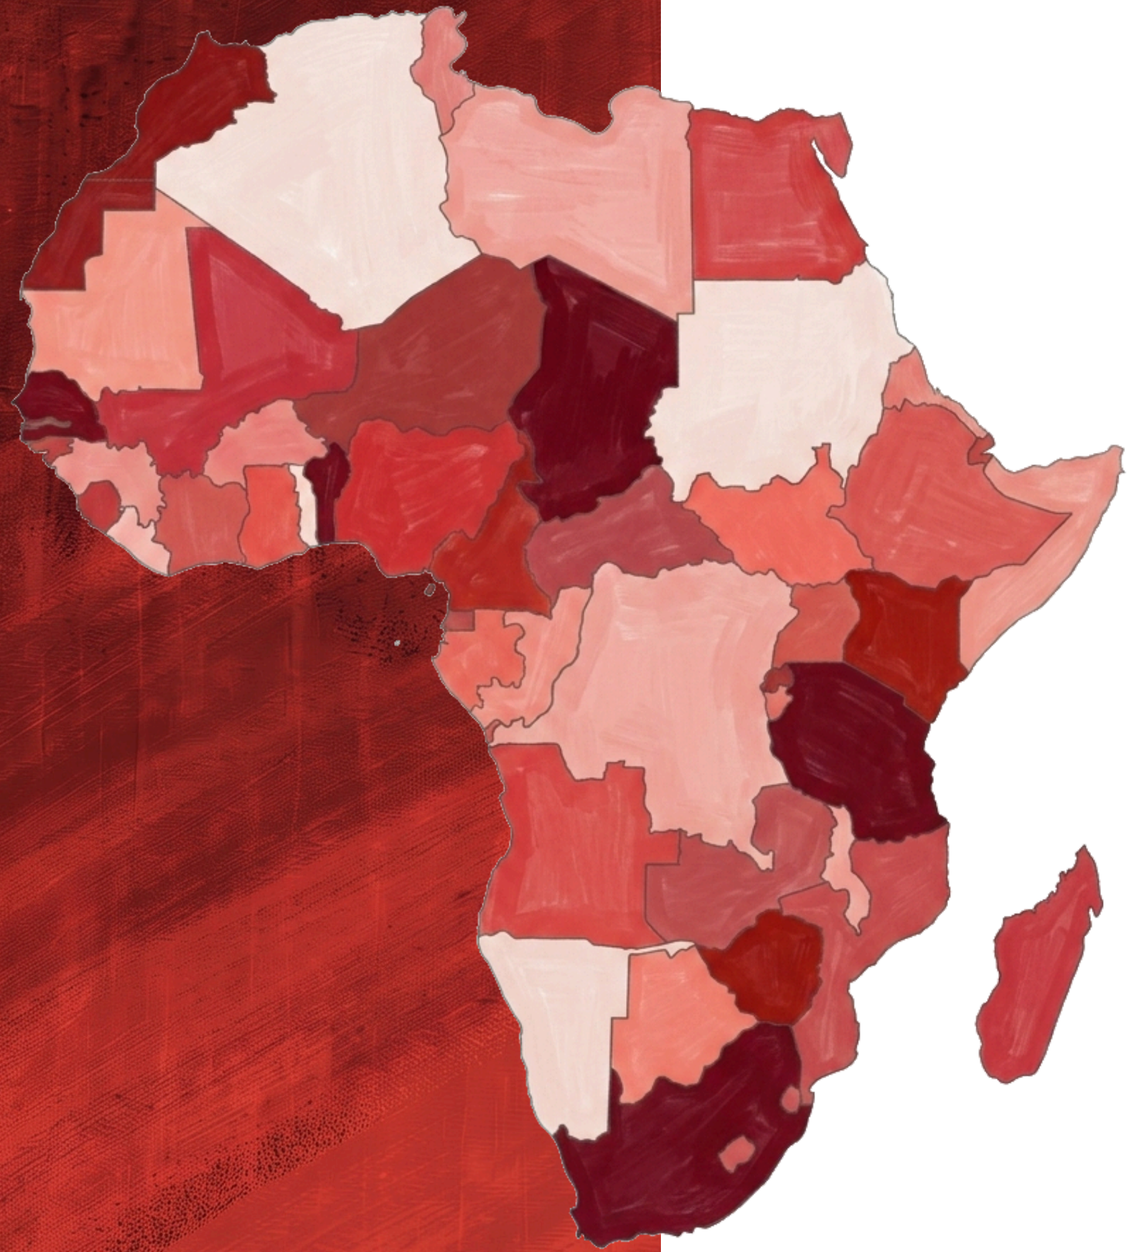
Culturally Relevant Support

Educational content shaped directly by our clinical team and validated by local user research.

Comprehensive All-in-One Platform

Unlike fragmented global apps (Flo, Clue), RedApple unifies prevention, tracking, telemedicine, and health records into a single, seamless journey

Together, we can build Africa’s most trusted reproductive healthcare platform.



Thank you.
